

Price Coordination with Asymmetric Information Sharing: Theory and Evidence

Data and Code

David P. Byrne* Nicolas de Roos† Matthew S. Lewis‡
Leslie M. Marx§ Xiaosong Wu¶

October 28, 2025

Below, we describe the data and code files used in creating the figures and calculations in our paper, “Price Coordination with Asymmetric Information Sharing: Theory and Evidence.” If assistance is required in accessing proprietary data via the contacts provided below, please contact David Byrne via email at byrned@unimelb.edu.au.

1 Data Source and Access

- Price data (**proprietary**)
 - We use the dataset from “Asymmetric Information Sharing in Oligopoly: A Natural Experiment in Retail Gasoline.” For additional details on data construction and validation, please refer to [Byrne et al. \(2025\)](#).
 - The dataset is constructed from raw data acquired from Informed Sources and contains the complete set of daily station-level retail gasoline prices available on their platform for Victoria, Australia.
 - Contact for data access at Informed Sources: Mr. Nick Ferris nferris@informedsources.com

2 Key Variables

id: Unique identifier for each retail petrol station.

t: Calendar date.

*University of Melbourne, byrned@unimelb.edu.au.

†University of Liverpool, nicderoos@gmail.com.

‡Clemson University, mslewis@clemson.edu.

§Duke University, marx@duke.edu.

¶University of Melbourne, andy.wu1@unimelb.edu.au.

bid: Brand identifier (1 = BP, 2 = Caltex, 3 = Coles, 4 = Woolworths, 5 = 7-Eleven).

p: Daily average retail price in cents per litre at each station.

c: Marginal cost of retail gasoline in cents per litre, measured by the Terminal Gate Price (TGP).

dp: Daily price change, defined as $\Delta p_t = p_t - p_{t-1}$.

marg: Retail margin, calculated as $p - c$.

coles_off: Indicator equal to 1 after Coles exited the Informed Sources platform.

cyc_peak: Indicator equal to 1 if the market-average price reaches a local maximum, as defined in Definition 2 of the paper; 0 otherwise.

cyc_bttm: Indicator equal to 1 if the market-average price reaches a local minimum, as defined in Definition 2; 0 otherwise.

st_peak: Indicator equal to 1 if the station-level price reaches a local maximum, as defined in Definition 3; 0 otherwise.

st_bttm: Indicator equal to 1 if the station-level price reaches a local minimum, as defined in Definition 3; 0 otherwise.

cyc_id: Market-cycle identifier defined from the peak of each cycle.

cyc_id_bttm: Market-cycle identifier defined from the bottom (trough) of the previous cycle.

cyc_prd_resto: Indicator equal to 1 for days between the previous market-cycle bottom and the current cycle peak (the restoration phase).

cyc_day_bttm: Day index within each cycle after the most recent market-level cycle bottom. The variable equals 0 on the trough day, 1 on the first day after the trough, and increases sequentially thereafter.

drop_coles: Indicator equal to 1 for Coles stations where Informed Sources did not manually collect data after Coles exited the platform.

is_cyc_drop: Indicator equal to 1 for irregular station-level cycles with durations shorter than 10 days or longer than 130 days, typically due to anomalous pricing or missing observations; 0 otherwise.

3 Run the Code

The `./Code` directory contains the scripts used to generate all tables and figures in the paper. All code has been verified to run using Stata/SE 19.0 for Mac.

To reproduce the results, open a terminal, navigate to this directory, and run:

```
$ ./0_rundirectory.sh
```

This command sequentially executes all scripts listed below. Each script reads the proprietary dataset `is_mel_p_2005_2019.dta` and produces the corresponding figure or table reported in the paper.

1. `tab1.do`

- Produces Table 1: Melbourne Station Counts and Shares in the Informed Sources Data.
- Output:
 - `./Output/tab1.dta`

2. `fig1_example.do`

- Produces Figure 1: Price Cycle Examples from 2015.
- Output:
 - `./Output/fig1_example.pdf`

3. `fig2_prices.do`

- Produces Figure 2: Daily Retail Prices Before and After Coles Exits the Informed Sources Platform.
- Output:
 - `./Output/fig2_prices.pdf`

4. `fig3_speed.do`

- Produces Figure 3: Restoration Speed Before and After Coles Exits the Platform.
- Output:
 - `./Output/fig3_speed.pdf`

5. `fig4_timing.do`

- Produces Figure 4: Restoration Timing Before and After Coles Exits the Informed Sources Platform.
- Outputs:
 - ./Output/fig4a_timing_coles.pdf
 - ./Output/fig4b_timing_riv.pdf
